The first known application of the word was to William the Conqueror, who was called William the Bastard before the conquest, and, indeed, called himself so ("Ego Wilhelmus cognomine bastardus").] 1. *n.* 1. A natural child; a child begotten and born out of wedlock; an illegitimate or spurious child. By the civil and canon laws (a rule adopted also in many of the United States), a bastard becomes a legitimate child by the marriage of the parents at any future time. But by the laws of England a child, to be legitimate, must at least be born after the lawful marriage; it does not require that the child shall be begotten in wedlock, but it is indispensable that it should be born after marriage, no matter how short the time, the law presuming it to be the child of the husband. The only legal incapacity of a bastard is that he cannot be heir or next of kin to any one save his own issue. Inheritance from the mother is allowed in some jurisdictions. In England the maintenance of a bastard in the first instance devolves on the mother, while in Scotland it is a joint burden upon both parents. The mother is entitled to the custody of the child in preference to the father. In the United States the father may be compelled to provide support.

The orig. form is uncertain. Cf. ML. *blatta*, *blatta*, *batta*, a bat, another application of L. *blatta*, an insect that shuns the light, a cockroach: see *Blatta*¹. For the change of *k* to *t*, cf. E. *mak*² = *mate*¹, and E. *crane* = Dan. *trana*, Sw. *trana*, Icel. *trán*. The AS. name of the bat is *brereamus*, > E. *breremouse*. The G. name is *Flodermans*; cf. E. *fluttermouse*.] A wing-banded, wing-footed flying mammal, of the order *Chiroptera* (which see). The species are upward of 100 in number, nearly cosmopolitan, but largest, most varied in character, and most abundant in individual in tropical and subtropical countries. The species of temperate countries, as of the United States and Europe, are comparatively few, small, and of such uniform characters that they are little objects of the extent and diversity of the order in warmer regions. Bats are the most nocturnal or vespertine of all animals, even more so than birds or insects; for they have not only any other means of locomotion than flying. They are

nocturnal and crepuscular, passing most of the daytime in dusky retreats, where they gather sometimes in almost incredible multitudes, and generally repose hanging head downward by their hind feet. In size they range from less than the size of a mouse to large forms with some five feet spread of wing. The body is usually softly furry; the wings are membranous and naked. The great majority

Heavy Bat. *Vesperugo pringi*, etc.

are insectivorous and carnivorous, and constitute the sub-order *Animalicora* or *Insectivora*; of these, a few prey upon other bats, and some of the genera *Desmodus* and *Diphylla*, suck the blood of large animals; but the great bats of South America called *vampires* are chiefly frugivorous. See *Desmodus*, *Vampyri*. The old-world fruit-bats, flying-foxes, or roussettes are mostly large species, constituting the family *Pteropodidae* and suborder *Fragmora*. See cut under *flying-fox*. The physiognomy of many of the bats is grotesque, owing to the extraordinary appendages of the snout, especially in the families *Rhinolophidae* and *Phyllostomatidae*, or horseshoe bats and leaf-nosed bats. The ears, too, are often of great size and much complexity of detail, and, like the various appendages of the face, and the wing-membranes themselves, serve as tactile organs of extreme delicacy, even to the extent of sensing objects without actual contact. The wings of bats are commonly given to representations of evil genii and demons, as those of birds are attached to good angels. The large bat represented on Egyptian monuments is one of the fruit-bats, the *Cynonycteris* *egyptiaca*. The Hebrew name of the bat of the Old Testament, *atlatph*, is now used in the form *Atlatpha* for a genus of American bats. The commonest species of the United States are the small brown bat, *Vesperugo subulatus*, and the red bat, *Lasiurus borealis*. Among European species may be noted the serotine (*Vesperugo serotinus*), the pipistrelle (*V. pipistrellus*), the barbastelle (*Barbastellus conatus*), the oreillard (*Plecotus auritus*), and the horseshoe bats (*Rhinolophus hipposideros* and *R. ferocquinus*). In heraldry the bat is always represented displayed, that is, with the wings opened, and is often called by its older name *serotine*. Bat's wing, in anat. (b) In *etching*, the pan of acid into which the plate is plunged to be bitten.

In *chem.*, an apparatus for modifying and regulating the heat in various chemical processes, by interposing a quantity of sand, water, or other substance between the fire and the vessel intended to be heated. When a liquid bath of a higher temperature than 212 is required, saturated solutions are employed in which the boiling-point is higher than that of water.—**Companions of the Bath**, the third or lowest class of the members of the order of the Bath.—**Compressed-air bath**, a bath consisting in remaining for a longer or shorter time in a chamber filled with compressed air. Such baths have been recommended as useful in certain diseases, in which an increased expansive force is required to cause the air to inflate the more delicate air-passages of the lungs. **Dung-bath**, a bath used in calico-printing. See *dunging*.—**Knights of the Bath**, an order of knighthood supposed to have been instituted at the coronation of Henry IV. in 1239. It received this name from the fact that the candidates for the honor were put into a bath the preceding evening, to denote a purification or absolution from all former stain, and that they were now to begin a new life. The present order of the Bath, however, was instituted by George I. in 1725, as a military order, consisting, exclusive of the sovereign, of a grand master and thirty-six companions. In 1815 the order was greatly extended, and in 1817 it was opened to civilians. It is now composed of three classes, viz.: military and civil knights grand-crosses, G. C. B.; knights commanders, K. C. B.; and knights companions, C. B. The

2. Star of the Grand Cross.

badge (fig. 1) is a golden Maltese cross of eight points, with the lion of England in the four principal angles, and having in a circle in the center the rose, thistle, and shamrock (representing respectively England, Scotland, and Ireland), between three imperial crowns; motto, *Tria juncta*

in *apo*. Stars are also worn by the first two classes. That of the knights grand crosses (fig. 2) is of silver, with eight points of rays wavy on which is a gold cross bearing three crowns, encircled by a ribbon displaying the motto of the order, while beneath is a scroll inscribed *Ich dien* (I serve), the motto of the Prince of Wales. The star of the knights commanders differs chiefly in lacking the wavy rays. **Medicated bath**, a bath of liquid or vapor designed to produce a curative effect by virtue of some medicine mixed in it. **Mercurial bath**, a bath used in the pneumatic trough to collect such gases as are readily absorbed by water. **Metal-bath**, a bath used in chemical operations requiring a higher temperature than can be produced by means of a water-bath. Mercury, fusible metal, tin, and lead are employed for such baths. **Russian bath**, a kind of bath employed in Russia, and introduced thence in other countries. It resembles in principle the ancient and the Turkish baths, but differs from the latter in that the subject, after exposure to the influence of very hot vapor, with the attendant kneading, lathering, etc., is suddenly and violently cooled by means of a jet of ice-cold water. It is said to be of service in alleviating rheumatism. — **Sour bath**, in *transit*, an acid liquid made of bran and refuse malt. It is employed to remove the lime used in a previous process, and also to soften the skin to render it more absorbent of the tanning materials. **Tin-bath**, molten tin covered with melted tallow to prevent the oxidation of the metal. It is used in giving a coating of tin to other metals, as sheet-iron, to form the so-called tin plate. **Turkish bath**, a kind of bath introduced into the East in which the subject, after having undergone copious perspiration in a heated room, is subjected to various processes, as soaping, washing, kneading (shampooing), etc., and ultimately proceeds to an outer apartment, where he is placed on a couch to cool. Turkish baths, or modifications of them, are provided in all hydrotherapeutic establishments, and are to be found in most towns of considerable size. **White bath**, a bath used in dyeing; an emulsion formed by Gallic acid and the carbonates of alkalis.

It is here left open whether there be any form of force which may be especially designated as "vital." Many of the animal functions are known to be physical and chemical, and if there be any one which appears to be less explicable by reference to these forces than the others, it is that of nutrition. Probably in this instance force has been so metamorphosed through the influence of the originative or conscious force in evolution, that it is a distinct species in the category of forces. elect., a voltaic cell, or more properly a number of voltaic cells (see *cell*) arranged together so as to give a powerful current of electricity.

The way in which the cells are coupled depends upon the nature of the current which is desired and the relation between the external and internal resistance. (See *resistance*.) For example, if the cells are arranged in series, the copper of the first with the zinc of the next, and so on, the result is to give the maximum electromotive force, on the other hand, if arranged abreast, all the zincs being connected together, and all the copper plates together, the electromotive force is the same as for a single cell, but the internal or battery resistance is diminished, and hence the strength of the current or the quantity of electricity may, under certain conditions, be much increased. The first method is sometimes spoken of in popular language as the arrangement for *intensity*, the second for *quantity*. An early form of battery was *Volta's pile*, and another his *crown des tasses*, or "crown of cups." The different kinds of battery are named according to the materials or the form of the cells of which they are composed, or the way in which the cells are arranged. [*Pennsylvania.*]—**Ambulant battery**, a battery of heavy siege-guns provided with traveling-carriages to transport them from point to point.—**Anderson battery**, a galvanic battery using zinc and carbon in baths of muriate of ammonia, oxalate of chromium, and potassium.—**Barbette battery**. *See barbette.*—**Battery amalgamation**, in *mining*, amalgamation effected by placing mercury in the battery or mortars while the metalliferous rock is being stamped.—**Blinded battery**, a battery in which the guns are protected by an armored parapet, by bomb proof blinds or casemates, or by embrasure-casings or mantelets.—**Breaching battery**, a battery so placed that its fire is perpendicular, or nearly so, to a line of wall or parapet to be breached. It is used for making an opening in the enemy's works through which an assaulting column may enter.—**Cavalier battery**, a battery mounted in the cavalier (which see), and arranged to deliver a plunging fire into the works of an assailant.—**Clearing battery**, in breweries, an arrangement for straining the wort from the vat. It includes a device for cutting off the flow when the wort has attained a sufficient depth.—**Counter-battery**. (a) A battery intended to silence and overthrow guns of the defense which bear upon the breaching-batteries. Its guns are generally so placed as to fire along the ditches of the works. (b) Any battery opposed to another. *Tidball.*—**Covered battery**, a battery concealed from the enemy, and intended to deliver a vertical fire. *Tidball.*—**Cross-batteries**, two or more batteries whose lines of fire intersect.—**Direct battery**, a battery whose fire is perpendicular to the line of works attacked.—**Enfilading battery**, a battery which sweeps the length of an enemy's line, or takes him on the flank.—**Fascine battery**, a battery of which the parapet is wholly or partially made of fascines: used where the earth is loose or sandy.—**Floating battery**, a battery erected either on a simple raft or on a ship's hull, for the defense of the coast or for the bombardment of an enemy's ports. The name is sometimes given to a type of ship which, though it may be provided with independent propelling power, is designed primarily not for navigation, but merely to afford support and cover to heavy guns.—**Gabion battery**, a battery with a parapet formed of gabions filled with earth or sand.—**Galvanic battery**, a pile or series of plates of copper and zinc, or of any materials susceptible of galvanic action. *See galvanic.*—**Grove's gas-battery**, a battery in which the cell consists of two glass tubes partly filled with water, and the remainder with oxygen and hydrogen respectively: in these tubes two platinum electrodes are immersed.—**Horizontal battery**, a battery the interior or terreplein of which is on the natural level of the ground. *Tidball.*—**Indented battery**, or *battery à crémaillère*, a battery constructed with salient and reentrant angles for obtaining an oblique as well as a direct fire, and to afford shelter from the enfilade fire of the enemy. *Tidball.*—**Joint batteries**, batteries whose fire is directed against the same object. *Latimer-Clark battery, an electric battery intended as a standard, the electromotive force being constant. It is a combination of zinc in sulphate of zinc and mercury in sulphate of mercury. *E. H. Knight.*—**Light battery**. (a) A mounted field-battery. (b) A battery composed of guns of small caliber.—**Magnetic battery**. *See magnetic.*—**Masked battery**, a battery artificially concealed until required to open upon the enemy. *Tidball.*—**Mortar-battery**, a battery having an armament of mortars. Such batteries are constructed with a parapet without embrasures, an interior sloped or revetted, but retaining the natural slope of the soil, and platforms horizontal instead of inclining slightly toward the front, as in gun-batteries. *See* *see* on next page.—**Mountain battery**, a battery of light guns, so fitted that the pieces and their carriages may be transported upon the backs of mules or pack horses.—**Oblique battery**, a battery whose line of fire makes an angle of 20° or more with the*

Smooth-bore guns firing spherical projectiles are most effective for ricochet fire. **Siege battery**, a battery for siege operations. Such batteries are either *paed*, comprising siege-guns and mortars of the heaviest caliber and largest size, or *mobile*, consisting of field guns and small mortars. **Storage battery**, or **secondary battery**, *in-bet*, a combination of secondary cells or accumulators which when once charged may be used for a considerable time after as a source of an electrical current. The *Plante cell* consists essentially of two plates of metallic lead (*C*, *C'*) rolled into a spiral form, and in the improved Faure form covered

(also *gebed* = *OS. gibeð* = *OHG. gabet*, *MHG. G. gebet*, neut.), a prayer, *< biddan*, etc., pray: see *bid*. Beads are used by Roman Catholics to keep them right as to the number of their prayers, one bead of the rosary being dropped every time a prayer is said; hence the transference of the name from that which is counted (the prayers) to that which is used to count with. Cf. *Sp. cuentas*, *Pg. contas*, the beads of a rosary, *< Sp. Pg. contar*, count.] 1†. Prayer; a prayer; specifically, a prayer of the list or bead-roll, read at public church-services by the preacher before his sermon, or by the curate (see *bead-roll*); usually in the plural. The commonest, though not the only, appliance for reckoning these prayers was, and still is, a string of *beads* so put together that every set of ten smaller ones for the "Hail Marys" is parted by a larger bead, to tell when the "Our Father" must be recited.

Rock, Church of our Fathers, III. i. 320.

The bead is a very frequent ornament, used to mark a junction or a separation, as between the shaft and the capital of a column, to dress an angle, etc. It is much used in woodwork of all kinds, from carpenter's work to the finest kind of joinery and cabinet-work. Among joiners the bead is variously introduced: as, (a) *bead and butt* (fig. 1), framed work in which the panel is flush with the framing and has a bead run on two edges in the direction of the grain only, while the ends are left plain; (b) *bead and flush* (fig. 2), framed work in which a bead is run on the edge of the framing; (c) *bead and quirk* (fig. 3), the edge of a piece of stuff on which a bead is formed, or stuck, as it is called, flush with the surface; (d) *bead and double quirk*, or *return bead* (fig. 4), the angle of a piece of stuff on which a bead is stuck and quirked or relieved on both surfaces; (e) *bead, butt, and square work*, a panel which has beads on two of its edges on one side only, while the other side is plain. *bear*¹ *bear*, *n.* [*ME. bere*, *< AS. bera* = *D. beer* = *LG. beer* = *OHG. bera*, *MHG. ber*, *G. bar*, *m.*, = *Scot. bera*, *f.*, a bear. Cf. *Scot. Dan. björn*, a bear (app. = *AS. beorn*, a man, a warrior, orig. a bear?—see *bern*²), an extended form

of the same word. Perhaps ult. = *L. ferus*, wild, *fera*, a wild beast: see *ferce*.] 1. A large plantigrade carnivorous or omnivorous mammal, of the family *Ursidae*, especially of the genus *Ursus*. The teeth of the true bears are 42, and none of the molars are sectorial. The animals are less truly carnivorous than most of the order to which they belong, feeding largely upon roots, fruits, etc., as well as honey and insects. The tail is rudimentary, and the muzzle is prominent, with mobile lips and a slender, sometimes very extensible, tongue. The best-known species is the brown or black bear of Europe and Asia, *Ursus arctos*, found chiefly in northern regions, of which several varieties are described, differing much in size and color, and to some extent in shape; it is ordinarily about 4 feet long and 2 feet high; its flesh is eaten, its pelt is used for robes, and its fat is in great demand as an unguent known as bear's grease. The grizzly bear of North America, *U. horribilis*, is as regards specific classification hardly separable from the last, and like it runs into several varieties, as the cinnamon bear, etc. It is ordinarily larger than the European, and is noted for its ferocity and tenacity of life. It inhabits the mountainous portions of western North America. The common black bear of North America is a smaller and distinct species, *U. americanus*, usually black with a tawny snout, but it also runs into a cinnamon variety. See cut under *Ursus*. The polar bear or white bear, *Ursus* or *Thalassarctos maritimus*, is very distinct,

of great size, peculiar shape, and white or whitish color, though seals constitute much of its food. The Syrian bear, *U. syriacus*, and the Himalayan bear, *U. himalayensis*, respectively inhabit the regions which they take their names. The spectacled bear, *Ursus* or *Tremarctos ornatus*, is the sole representative of the *Ursidae* in South America; so called from the light-colored rings around the eyes, which have exactly the appearance of a pair of spectacles, the rest of the face and body being black. The Malayan bear or buntang, *U. malayanus*, is a small, black, close haired species, with a white mark on the throat, with protrusible lips and slender tongue, capable of being taught a variety of amusing tricks in confinement. The sloth-bear or assial of India is distinct from the other bears, and is usually placed in a different genus, *Melursus labialis*. See *Ursidae*, and cut under *assial*.

This is now an exclusive prerogative of the pope, but for several centuries it was also exercised by local bishops or metropolitans. It is usually the second step toward canonization, and cannot take place till fifty years after the death of the person to be beatified, except in the case of martyrs. The process is an elaborate one, consisting of thirteen or fourteen stages, and extending over many years, during which the claims of the reputed saint are carefully and strictly investigated. If the final result is favorable, the pope's decree is publicly read in the pontifical church, the image and relics of the newly beatified are incensed, etc. See *canonization*.

= *Syn.* Beautiful, Beauteous, Handsome, Pretty, Fair, Lovely, Comely, charming, all apply to that which is highly pleasing, especially to the eye. *Beautiful*, the most general of these words, is also often the noblest and most spiritual, expressing that which gives the highest satisfaction to eye, ear, mind, or soul. *Beauteous* is chiefly poetic, and covers the less spiritual part of *beautiful*. *Handsome* is founded upon the notion of proportion, symmetry, as the result of cultivation or work; a *handsome* figure is strictly one that has been developed by attention to physical laws into the right proportions. It is less spiritual than *beautiful*; a *handsome* face is not necessarily a *beautiful* face. *Handsome* applies to larger or more important things than *pretty*; as, a *handsome* house; a *pretty* cottage. It is opposed to *homely*. *Pretty* applies to that which has symmetry and delicacy, a diminutive beauty, without the higher qualities of gracefulness, dignity, feeling, purpose, etc. A thing not small of its kind may be called *pretty* if it is of little dignity or consequence; as, a *pretty* dress or shade of color; but *pretty* is not used of men or their belongings, except in contempt. *Fair* starts from the notion of a brightness that catches the eye; it notes that sort of beauty which delights the eye by complexion and feature; in this sense it is now less common in prose. *Lovely* is a strong word for that which is immediately pleasing to the eye; it applies primarily to that which excites admiration and love. *Comely* applies rather to the human figure, chiefly in its proportions; it is used less commonly than *handsome* to express the result of care or training. See *elegant*.

And *beautiful* as some fair saint.

(c) A layer; a stratum; an extended mass of anything, whether upon the earth or within it; as, a *bed* of sulphur; a *bed* of sand or clay. In geology a bed is a layer of rock; a portion of a rock-mass which has so much homogeneity, and is so separated from the rock which lies over and under it, that it has a character of its own. This distinctness of character may be given by peculiarities of composition, texture, or color, or simply by a facility of separation from the associated beds. Thus, there may be a bed of marble intercalated in a mass of shale; or there may be several beds of marble associated together, each bed being individualized by peculiarities of texture or color. In the latter case there would ordinarily be a distinct break or solution of continuity between the different beds, so that when quarried they would separate from each other without difficulty along the plane of contact. The Latin word *stratum* is commonly employed in geological writings, and is almost the exact equivalent of *bed*. *Bed*, as applied to mineral deposits, implies ordinarily that the masses of ore thus characterized lie flat, and have more or less of the character of sedimentary deposits, in distinction from those of true veins, or lodes.

The same formation is also found in the Jura, in the valley of the Doubs. **St. Helen's beds**, Same as *Osborne series* (which see, under *series*).—**To be brought to bed**, to be confined in child-bed; followed by *of*; as, *to be brought to bed of a son*. **To make a bed**, to put it in order after it has been used.

An insect of the genus *Apis*; a hive-bee or honey-bee. See *Apis*¹.

The common honey-bee, *A. mellifica*, has from the earliest periods been kept in hives for its wax and honey. It is also found wild in great numbers now, especially in North America, where the bee was introduced by the European colonists, storing honey in hollow trees or in other suitable situations. It lives in swarms or societies of from 10,000 to 50,000 individuals. These swarms contain three classes of bees—the perfect females, or queen bees, the males or drones, and the imperfect or undeveloped females, called *neuters*, constituting the working bees. In each hive or swarm there is only one female or queen, whose sole office is to propagate the species. The queen is much larger than the other bees. When she dies, a young working bee three days old is selected, its cell is enlarged by breaking down the partitions, its food is changed to royal jelly or paste, and the drones serve merely for impregnating the queen, after which they are destroyed by the neuters. These last are the laborers of the hive. They collect the honey, form the cells, and feed the other bees and the young. They are furnished with a proboscis by which they suck the honey from flowers, and a mouth by which they swallow it, conveying it then to the hive in their stomachs, whence they dis-

gorge it into the cells. The pollen of flowers settles on the hairs with which their body is covered, whence it is collected into pellets by a brush on their second pair of legs, and deposited in a hollow in the third pair. It is called *bee-bread*, and is the food of the larvae or young. The adult bees feed on honey. The wax was at one time supposed to be formed from pollen by a digestive process, but it is now ascertained that it is formed by secretion from the honey.

The females and neuters have a barbed sting attached to a bag of poison, which flows into the wound inflicted by the sting. When a hive becomes overstocked a new colony is sent out under the direction of a queen bee. This is called *swarming*. Besides the com-

2. S.]

1. An alcoholic liquor made from any farinaceous grain, but generally from barley, which is first malted and ground, and its fermentable substance extracted by hot water. To this extract or infusion hops or some other vegetable product of an agreeable bitterness is added, and it is thereupon boiled for some time, both to concentrate it and to extract the useful matters from the hops. The liquor is then suffered to ferment in vats, the time allowed for fermentation depending upon the quality and kind of beer, and after it has become clear it is stored away or sent to the market. The beers of England and France, and for the most part those of Germany, become gradually sour by exposure to air. *Ale* and *beer* were formerly synonymous terms, *ale* being the earlier in use; at present, *beer* is the common name for all malt liquors, and *ale* is used specifically for a carefully made beer of a certain strength, and rather lighter than dark; thus, small beer, ginger beer, and the like, are not ale, nor are stout and porter. A distinction drawn by Andrew Boorde, in 1542, is that ale is made of malt and water, and should contain no other ingredients, while beer is made of malt, hops, and water.

beg¹ (beg), *v.*; pret. and pp. *begged*, ppr. *begging*. [Early mod. E. also *begg*, *begge*, < ME. *beggen*, first found in the early part of the 13th century (in the "Ancien Riwe"): origin un-

certain. Various explanations have been offered: (1) < ME. *bagge*, a bag (because beggars carry bags: see first quotation under *beggar*, *n.*); but this is certainly wrong. It would imply the forms **beppen*, **beppa*, as variants of *beppen*, *bagge*, but no such variants are found or are probable, and no such sense as 'put into a bag' or 'carry a bag,' which might connect the notion of 'bag' with that of 'beg,' belongs to the ME. verb *baggen*, which is found only in the sense of 'swell out like a bag': the sense of 'put into a bag' is modern, and that of 'carry a bag' does not exist; *bagger*, moreover, the supposed antecedent of *beggar*, is only modern. (2) < AS. *bedecian*, *beg* (connected with Goth. *bidagwa*, a beggar, appar. < *baljan* = AS. *balidan*, E. *bid*, ask; cf. D. *bedelen* = OHG. *betalam*, MHG. *betelen*, G. *beteln*, beg, freq. of D. *bidden* = G. *bitten* = AS. *biddan*, E. *bid*, ask); but the AS. *bedecian* occurs but once, in the 9th century, and there are no intermediate forms to connect it with ME. *beppen*. (3) < OFlem. **beppen*, beg; but there is no such word. (4) < OF. *beg*, the common radical of *begard*, *begart*, *beguard*, *begar* (ML. *begardus*, *begardus*, *beghardus*, etc.), and *beguin* (ML. *beginus*, *beginus*, *beginus*, *beginus*, etc.), names given to the members of a mendicant lay brotherhood (see *Beghard* and *Beguin*); also applied to any begging friar or other beggar. Such mendicants were very numerous at the time of the first appearance of the E. verb, and the derived OF. verb *bequiner*, *bequiner* (< *beginin*), with AF. *begger*, is actually found in the sense of 'beg.' The E. verb may be a back formation from the noun *beggar* (ME. *begger*, *beggere*, *beggar*, *beggere*), which is, in this view, an adapted form (as if a noun of agent in -ar¹, -er¹) of the OF. *begar*, *begard*, etc., a *Beghard*. *Beghard* is otherwise not found in ME., though the precise form *begger* is found in Wyclif and later as a designation of the mendicant friars (*Beghards*), appar. without direct reference to their begging.] **I. trans. 1.** To ask for or supplicate in charity; ask as alms.

To beg the question, in logic, to assume or take as granted that which is not more certain than the proposition to be proved, or which obviously involves the point in question, assume as a premise what no one who takes the opposite view of the question will admit.

E. also *begin, begine, beghine, beggin, bigin, biggayne*, < ME. *begyne, byggynne*, < OF. *beguine*, mod. F. *beguine* = Sp. *Fig. beguina* = It. *beghina, bighina* (MD. *beghijne, D. begijn, LG. and G. begine*), < ML. *beghina, begina, beggina, beguina, bigina*, etc. (cf. E. *big-quid*, from the same source). (2) *Beguine*, masc., < OF. *beguin*, mod. F. *beguin* = Sp. *Pg. beguino* = It. *beghino, bighino*, < ML. *beghinus, beginus, begginus, beguinus, biginus*, etc.: formed, first as fem., with suffix *-ina*, ML. *-ina, -inus*, from the name of Lambert *Begue* or *le Begue* (i. e., the stammerer: OF. *begue*, mod. F. *bègue*, dial. *beque, buque*, stammering; of unknown origin), a priest of Liège, who founded the sisterhood. See also *Beghard*. The origin of the name was not generally known, and the forms varied, leading to many etymological conjectures. The connection with E. *beggar* and *beg* is perhaps real: in the sense of 'hypocrite' and 'bigot' (as in It. *beghino*), the word was later confused with *bigot*, q. v.] 1. A name given to the members of various religious communities of women who, professing a life of poverty and self-denial, went about in coarse gray clothing (of undyed wool), reading the Scriptures and exhorting the people. 2. [Only *Beguine*.] A member of a community of men founded on the same general principle of life as that of the *Beguines* (see 1.). They became infected with various heresies, especially with systems of almsgiving which were afterwards propagated among the communities of women. They were condemned by Pope John XXII in the early part of the fourteenth century. The faithful *Beguines* gradually died in numbers with the different orders of nuns. The last generally obnoxious and the object of severe measures, had greatly diminished by the following century, but continued to exist till about the middle of the sixteenth. Also called *Beghards*. [These names have been frequently used as common nouns without capitals.]

beguinage (beg'in-āj, or, as mod. F., bā-gē-nāzh'), *n.* [F. *beguinage*, OF. *beguinage* (> ML. *beghinagium*), < *beguine*, a *Beguine*. See *Beguine* and *-age*.] A community of *Beguines*. A *beguinage* usually consists of a large walled inclosure, containing a number of small detached houses, each inhabited by one or two *Beguines*; there are also some common houses, especially for the novices and younger members of the community. In the center is the church, where certain religious offices are performed in common. Each *Beguine* keeps possession of her own property, and may support herself from it, or from the work of her hands, or by serving others in their houses. They are free to leave at any time, and take only simple vows of chastity and obedience during residence. Pious women may also, under certain restrictions, rent houses and live inside the inclosure without formally joining the community. Such establishments are now chiefly met with in Belgium; the nearest one near Ghent, built by the Duke of Arenberg in 1574, is the finest example, and one of the most recent.

—**Syn.** 1. Carriage, Behavior, Conduct, Deportment, Demeanor, bearing, manner, manners, all denote primarily outward manner or conduct, but naturally are freely extended to internal states or activities. Carriage, the way of carrying oneself, may be more physical attitude, or it may be personal manners, as expressing states of mind: we speak of a haughty or noble carriage, but not ordinarily of an ignoble, emerging, or base carriage. Behavior is the most general expression of one's mode of acting; it also refers particularly to comparatively conspicuous actions and conduct. Conduct is more applicable to actions viewed as connected into a course of life, especially to actions considered with reference to morality. Deportment is especially behavior in the line of the proprieties or duties of life: as, Mr. Turveydrop was a model of deportment. The scholars' rank depends partly upon their deportment. Demeanor is most used for manners as expressing character; it is a more delicate word than the others, and is generally used in a good sense. We may speak of lofty or gracious carriage, good, bad, wise, foolish, modest, correct behavior; exemplary conduct; grand, modest, correct deportment; quiet, refined demeanor.

Nothing can be more delicate without being fantastical, nothing more firm and based in nature and sentiment, than the courtship and mutual carriage of the sexes (in England).

Behind time, later than the proper or appointed time in doing anything. = *Syn. Behind*. *After*. *Behind* relates primarily to position; *after*, to time. When *after* notes position, it is less close or exact than *behind*, and it means position in motion. To say that men stood one *after* another in a line was once correct (see *Chaucer*, Knight's Tale, l. 901, "kneeld . . . each after other"), but is not so now. They may come one *after* another, that is, somewhat irregularly and apart; they came one *behind* another, that is, close together, one covering another. being (bē'ing), *n.* [*< ME. beyng, byng, verbal n. of been, be.*] 1. Existence in its most comprehensive sense, as opposed to non-existence; existence, whether real or only in thought.—2. In *metaph.*, subsistence in a state not necessarily amounting to actual existence; rudimentary existence. But the word is used in different senses by different philosophers. Hegel defines it as immediacy, that is, the abstract character of the present. In its most proper acceptance, it is the name given by philosophical reflection to that which is revealed in immediate consciousness independently of the distinction of subject and object. It may also be defined, but with less precision, as the abstract noun corresponding to the concrete class embracing every object. *Being* is also used in philosophy influenced by Aristotle to signify the rudiment or germ of existence, consisting in a nature, or principle of growth, before actual existence. It is also frequently used to mean actual existence, the complete preparation to produce effects on the senses and on other objects. Psychologically, *being* may be defined as the objectification of consciousness, though the distinction of subject from object logically presupposes being.

The origin of the word was not known, or felt, in Rom., and the forms varied; the *It. battifredo* (after *ML. battifredus*) simulates *battere*, beat, strike (as an alarm-bell or a clock), and the *E. form* (after *ML. beffredus*) simulates *bell*, whence the restriction in mod. E. to a bell-tower. The same first element also occurs in *bainberg* and *hauberk*; the second, with accent, in *affray*.]

ly equally developed and provided with hooks, an internal shell terminated behind by a rostrum of variable form, and a well-developed straight phragmacone. The species are numerous in the Secondary and Tertiary formations, and especially in the Cretaceous, and their remains are often like shells found to most persons here, and in the Cretaceous formations of the United States. The body of the animal is cylindrical, the head is small, the rostrum is a sub-cylindrical, hollow, beak-like tube, the phragmacone which is hollowed into a central canal, and is the rostrum, in which is lodged the phragmacone. The phragmacone is a series of chambers separated by septa, perforated by apertures for the passage of the *operculum* or *operculum*. The phragmacone is the common sign of the modern representative, though on an inferior scale, of the ancient

bell to give the alarm to the garrison, and also to summon the vassals of a feudal lord to his defense. This circumstance helped the belief that the word was connected with *bell*.

belief (bē-lēf'), *n.* [Early mod. E. *beleaf*, *beleeve*, < ME. *beleve*, *beleafe*, with prefix *be-* (as in *believe*, *q. v.*), parallel with the earlier *leve*, by aphoresis for *ilve*, < AS. *gelēafa* = OS. *gelōho* = D. *geloof* = MLG. *gelōve*, *gelōf* = OHG. *giloubo*, MHG. *geloube*, G. *glaube*, masc., = Goth. *galaubeins*, fem., *belief*, < *galaubs*, dear, valuable: see *believe*.] 1. Confidence reposed in any person or thing; faith; trust: as, a child's *belief* in his parents.

To make the worthy Leonatus mad,

By wounding his *belief* in her renown.

Shak., Cymbeline, v. 5.

2. A conviction of the truth of a given proposition or an alleged fact, resting upon grounds insufficient to constitute positive knowledge. Knowledge is a state of mind which necessarily implies a corresponding state of things; belief is a state of mind merely, and does not necessarily involve a corresponding state of things. But *belief* is sometimes used to include the absolute conviction or certainty which accompanies knowledge.

Neither do I labor for a greater esteem than may in some little measure draw a *belief* from you, to do yourself good, and not to grace me. *Shak.*, As you Like it, v. 2.

Belief admits of all degrees, from the slightest suspicion to the fullest assurance. *Reid*.

He [James Mill] uses the word *belief* as the most general term for every species of conviction or assurance: the assurance of what is before our eyes, as well as of that which we only remember or expect; of what we know by direct perception, as well as of what we accept on the evidence of testimony or of reasoning. *J. S. Mill*.

By a singular freak of language we use the word *belief* to designate both the least persistent and the most persistent coherence among our states of consciousness,—to describe our state of mind with reference both to those propositions of the truth of which we are least certain, and to those of the truth of which we are most certain. *J. Fiske*, Cosmic Philos., i. 61.

3. Persuasion of the truth of a proposition, but with the consciousness that the positive evidence for it is insufficient or wanting; especially, assurance of the truth of what rests chiefly or solely upon authority. (a) In this sense, the word sometimes implies that the proposition is admitted as only probable. (b) It sometimes implies that the proposition is admitted as being so reasonable that it needs no proof. (c) Sometimes used for religious faith.

Knowledge and *belief* differ not only in degree but in kind. Knowledge is a certainty founded upon insight; *belief* is a certainty founded upon feeling. The one is perspicuous and objective; the other is obscure and subjective. *Sir W. Hamilton*, Lectures on Logic, xxvii.

One in whom persuasion and *belief*

Had ripened into faith, and faith become

A passionate intuition. *Wordsworth*, Excursion, iv.

They [women] persuade rather than convince, and value *belief* rather as a source of consolation than as a faithful expression of the reality of things. *Lecky*, Europ. Morals, II. 381.

4. That which is believed; an object of belief.

Superstitious prophecies are the *belief* of fools. *Bacon*.

We have but to read the accounts of the early *beliefs* of mankind, or the present *beliefs* of savages and semi-cultivated nations, to see how large a field pure fiction occupies. *G. H. Lewes*, Probs. of Life and Mind, II. iii. § 7.

In the cathedrals, the popular *beliefs*, hopes, fears, fancies, and aspirations found expression and were perpetuated in a language intelligible to all.

C. E. Nocton, Travel and Study in Italy, p. 166.

5. The whole body of tenets held by the professors of any faith.

In the heat of persecution, to which the Christian *beliefs* was subject, upon its first promulgation. *Hooker*.

The *beliefs* of Christianity is a *belief* in the beauty of holiness; the creed of Hellas is a *belief* in the beauty of the world and of mankind. *Keary*, Prim. Belief, iv.

6. A creed; a formula embodying the essential doctrines of a religion or a church.

Ye ought to see them have their *beliefs*, to know the commandments of God, to keep their holy-days, and not to lose their time in idleness. *Lattimer*, Sermons, p. 14.

A hollow metallic instrument which gives forth a ringing sound, generally of a musical quality, when struck with a clapper, hammer, or other appliance. Its usual shape resembles that of an inverted cup.

Bell, section.

C, clapper; D, crown;
E, mouth; G, shoulder;
H, flange.

It is often made saucer-shaped, and in this case is commonly termed *bell*. Bells of this form are generally used as call-bells or signal-bells. Bells are made for many purposes, and in a great variety of forms and sizes. They usually consist of an alloy of copper and tin, called bell-metal (q. v.). Church-bells are known to have been in use in Italy about A. D. 400, and in France in the sixth century. The earliest bells were often four-sided, made of thin plates of metal riveted together. The manufacture of the largest and most bells has been developed since the fifteenth century. The largest ever made is the great bell of Moscow, called the *Gra. Kolokol*, cast in 1733, and computed to weigh about 40,000 pounds. It is about 34 feet in diameter and the same in height. It is supposed never to have been rung, and is now used as a chapel, having been raised in 1840 after lying half buried since 1755, when a piece was broken out of its side in a fire. The largest bell in actual use weighs 128 tons, and is also in Moscow. The bell of the Buddhist monastery Chion-in, in Kyoto, Japan, was cast in 1600, and weighs 12,000 cattles, or over 74 tons of 2,240 pounds each. Among the great

The Great Bell of Moscow.

French bells, the bell of Notre Dame, Paris, weighs about 13 tons, and the bell of St. Peter's cathedral in Rome, and that of Amiens, are 11 tons. In England, the "Big Ben" of Westminster weighs over 10 tons, but is cracked. The Great Bell of York, 10 tons, and the Great Bell of London, 7 tons. The new "Kaiserbell" of Cologne, with a diameter of 10 feet, weighs 100 tons. For church-bells, much brass is used, and the bells are made in shape like a triangle, the sides being rounded off, and the top being flattened. The bell of Cologne is a bell of ordinary form, and is a bell of ordinary size. The bell of Cologne is a bell of ordinary form, and is a bell of ordinary size.

3. *pl.* A number of small bells in the form of hawks' bells or sleigh-bells, fastened to a handle and constituting a toy for amusing an infant.—4. *pl. Naut.*, the term employed on ship-board, as *o'clock* is on shore, to denote the divisions of daily time, from their being marked by bells, which are struck every half-hour. The day, beginning at midnight, is divided into watches of four hours each, except the watch from 4 to 8 P. M., which is subdivided into two dog-watches. A full watch thus consists of eight half hours, and its progress is noted by the number of strokes on the bell. For instance, 1 o'clock P. M. is equivalent to two bells in the afternoon watch; 3 o'clock, to six bells; 4 o'clock, to eight bells, etc.

Sir T. Browne, Religio Medici, i. 3.

Bell, book, and candle, a phrase popularly used in connection with a mode of solemn excommunication formerly practised in the Roman Catholic Church. After the formula had been read and the book closed, the assistants cast the lighted candles they held in their hands to the ground so as to extinguish them, and the bells were rung together without order; the last two ceremonies symbolized the disorder and going out of grace in the souls of the persons excommunicated.—**Blessed** or **hallowed bell**, in the *Rom. Cath. Ch.*, a bell which has received the solemn blessing of the church, in which the bishop prays that its sound may avail to summon the faithful, to excite their devotion, to drive away storms, and that the powers of the air, hearing it, may tremble and flee before the standard of the holy cross of the Son of God engraved upon it, etc.—**Elevation** or **Sanctus bell**, in the *Rom. Cath. Ch.*, a bell rung during the celebration of mass to give notification of the more solemn portions; now usually a small hand-bell, but in pre-Reformation English churches a large bell often hung in a bell-gable erected over the nave, immediately above the entrance of the chancel, from which it was rung by one of the acolytes. *Oxford Glossary*, p. 74.—**In the bell**. (a) In flower. [Scotch.] (b) In seed, or having the seed-capsules formed, as hops.—**Mass bell**. Same as *sacring bell*.—**Recording bell**, a bell attached to a hand-punch, or to an instrument of similar purpose, with which fares collected, as by a conductor, etc., or moneys taken in at a bar, are recorded.—**Sacring bell**, a bell rung during the celebration of the Roman Catholic mass, at the elevation of the host, at the Sanctus, and at other solemn services. When rung at the consecration it is also called the *Amicus bell*; at the time of the Sanctus, the *Sanctus bell*, etc. Also called *saints' bell*. **Saints' bell**. Same as *sacring bell*. The term is a corrupted form of *Sanctus bell*, but is no longer specifically restricted to the bell rung at the Sanctus. The saints' bell is now a small hand-bell rung within the church, but formerly it was sometimes a small church-bell suspended in a turret outside the church and rung by a rope from within.

gans for producing the current of air by which the pipes and reeds are sounded. It consists essentially of an air-chamber which can be alternately expanded and contracted, and a nozzle by which the current of air can be directed. The edges of these folds which are turned outward are usually stiffened by a wire frame. When the tube is pulled out to its full extent, its walls are flat; when it is contracted, it requires merely the space taken up by the folds of its material. In use, the back of a camera of this form can be fixed, by a screw or other device, at any distance from the front or lens end, within the limits of the contracted or expanded tube, that the focus of the lens or the particular work in hand may require.

1. A broad flat strip or strap of leather or other flexible material, used to encircle the waist; a girdle; cinch; zone; band. Ordinarily it is worn buckled or hooked tight to the waist, and in all ages it has been a common article of apparel, both to keep the garments in place and to support weapons, or a purse, a writing-case, or the like: it may be made of any material. The military belt of the middle ages was sometimes composed of small plates of metal held to each other by rings, was attached to the armor, and, according to the fashion of the latter, was worn more or less low, sometimes resting below the hips upon the skirt of plate-armor. Sometimes the sword was not secured to the belt, which was then rather a mark of rank and dignity than a necessary part of the dress. (See *sword-belt* and *buldric*.) II. *n.* 1. A member of an order of monks founded at Monte Cassino, between Rome and Naples, by St. Benedict of Nursia, about A. D. 530. The rules of the order (which was open to persons of all ages, conditions, and callings) enjoined silence and some useful employment when not engaged in divine service. Every monastery had a library, every monk a pen and tablets, and study and the copying of manuscripts were encouraged. The monasteries became centers of learning and the liberal arts, and the name of the order synonymous with scholarship and erudition. The order was introduced into England about A. D. 600, by St. Augustine of Canterbury. The oldest establishment in the United States is that of St. Vincent's Abbey in Westmoreland county, Pennsylvania, founded by a colony of monks from Bavaria in 1846. J. M. Neale, *Eastern Church*, i. 352, note.

Illustrations of ancient benedictions are afforded by Gen. xxiv. 60 (a nuptial blessing); Gen. xxvii. 27-29 (a death-bed blessing); Num. vi. 24-27 (a priestly blessing). The *apostolic benediction* is that proceeding from the pope, and is either given personally, as at Rome, or by delegation in other parts of the world. See *blessing*. In *feudal law*, originally, a fee or an estate in lands granted for life only, and held *ex mero beneficio* (on the mere good pleasure) of the donor. Such estates afterward becoming hereditary, the word *benefice* was used for grants to individuals, and *benefice* became restricted to church livings.

2. An ecclesiastical living; a church office endowed with a revenue for its proper fulfillment; the revenue itself. The following terms of canon law are frequently found associated with this word which is of last-rank importance: A benefice involving no other obligation than service in the public offices of the church is *simple*; if the cure of souls is attached to it, *double*; if with a certain rank attached, *dignitary* or *major*; the two former without rank, *minor*. Thus, a *chantry* was a simple benefice; a *prebend* gives the right to only a part of the income of a canonry attached to a collegiate or cathedral church; while the *benefice* is perpetual and has a charge, though there are some (called *anatomical*) from their being in the hands of the one conferring them revocable. The benefice is said to be *regular* if held by one qualified to fulfil the duties of the office; *secular* if held by a layman; and in *commendam* when in the charge of one commended by the proper authorities until one duly qualified to fulfil its duties is appointed. In the last-named case the discharge of the office is provided for at the expense of the holder. (See *above*.) A benefice is received by *election* for example, by a chapter, or from a *patriarch*, who is properly said to *present* to it, or is *interfered* by the proper ecclesiastical superior; these nominations, in the Roman Catholic Church, regularly need *confirmation* from the pope. His action may cause a benefice to be *reserved* or *affected* (which see); or the collation is made *alternative*, that is, to the pope and regular patron or superior, according to the months in which the benefice falls vacant, by definite system.

2. A benefaction; a beneficent act or gift. — *Syn.* *Benevolence, Beneficence, Bounty, Liberality, Generosity, Munificence, Charity, Benevolence*, literally will wishing is expressive of the disposition to do good; hence it easily came to be applied to charitable gifts. *Benevolence* literally will doing is the outmost and variable expression of benevolence. It is a strong though general word for active and abundant helpfulness to those

who are in need. *Benevolence* may exist without the means or opportunity for beneficence, but *beneficence* always presupposes *benevolence*. *Bounty* is expressive of kind feeling, but more expressive of abundant giving. *Liberality* is giving which is large in proportion to the means of the giver. *Generosity* adds to the notion of liberality that of largeness or nobleness of spirit in connection with the gift. *Munificence* is giving on a large scale, not restricting itself to necessary things, but giving lavishly; it is the one of these words most likely to be applied to ostentation or self-seeking liberality, but not necessarily so. *Charity*, while having the best original meaning has come to be a general word; as to gifts, it is what is bestowed upon the poor or needy, but not always with warm or kindly feelings: as, official *charity*.

With a bow to Hepzibah, and a degree of paternal *benevolence* in his parting nod to Phoebe, the Judge left the shop, and went smiling along the street.

By the latter arrangement the weaker man obtained the protection of the stronger, and he who felt himself insecure placed his title under the defence of the church.

=Syn. 5. Bent, Propensity, Bias, Inclination, Tendency, Proneness. *Disposition*, all keep more or less of their original figurativeness. *Bent* is the general and natural state of the mind as disposed toward something, a decided and fixed turning of the mind toward a particular object or mode of action. *Propensity* is less deep than *bent*, less a matter of the whole nature, and is often applied to a strong appetency toward that which is evil. *Bias* has often the same meaning as *bent*, but tends specially to denote a sort of external and continued action upon the mind: as, 'morality influences men's minds and gives a *bias* to all their actions.' *Locke.* *Bias* is often little more than prejudice. *Inclination* is a sort of *bent*; a leaning, more or less decided, in some direction. *Tendency* is a little more than *inclination*, stronger and more permanent. *Proneness* is by derivation a downward tendency, a strong natural inclination toward that which is in some degree evil: as, *prone*ness to err, to self-justification, to vice; but it is also used in a good sense. *Disposition* is often a matter of character, with more of choice in it than in the others, but it is used with freedom in lighter senses: as, the *disposition* to work; the *disposition* of a plant to climb.

The Berkeleyan idealism is intimately interwoven with an extreme nominalism, which denies the existence of general conceptions. Berkeley's theory of vision, which in a modified form is now generally adopted by scientific men, is that while we see two dimensions of space, the third is recognized by touch (that is, by the muscular sense), until the eyes become educated to associating certain appearances with certain feelings of touch.

The orig. sense of LL. *biblia*, the books, is made prominent in ML. *bibliotheca*, the Bible, lit. a library: see *bibliotheca*.] 1. The Book, or rather the Books (see etym.), by way of eminence; the Scriptures of the Old and New Testaments. The word *bible* is not found in the English version, but the Greek word occurs frequently, being always translated "book" or "books," sometimes indicating the books of the Old Testament. The Bible consists of two parts: the Old Testament, written in Hebrew, containing the Law, the Prophets, and the sacred writings, or Hagiographa; and the New Testament, written in Greek, consisting of the four Gospels, the Book of Acts, the Epistles of Paul and other apostolic writers, and the Apocalypse or Book of Revelation, the only strictly prophetic book which it contains. Roman Catholic writers accept, in addition to these, most of the books contained in the Apocrypha of the King James version, which occur in the Septuagint (see below) and Vulgate, distributed among the other books of the Old Testament. The principal ancient versions of the Bible, or of portions of it, are the *Targumim*, a Chaldee or Aramaic paraphrase or interpretation of the more ancient Hebrew Scriptures; the *Samaritan Pentateuch*, a Hebrew version of the first five books of the Old Testament, ancient in its character, and preserved with jealous care among the Samaritans; the *Septuagint*, a Greek version of the Old Testament prepared by Jewish scholars at Alexandria under the Ptolemies, principally in the third century B. C.; the *Vulgate*, a Latin version of both Old Testament and New Testament, prepared by Jerome at the close of the fourth century A. D.; and the *Peshito*, a Syriac version of the Old Testament

and the major part of the New Testament, probably prepared in the second century A. D. Translations were early made into the principal languages of Christendom. The first complete translation into English was that of Wyclif, about 1383; and the first printed English versions were those of Tyndale and Coverdale, 1524-35. Other important versions are the *Lutheran*, in the German, by Martin Luther, 1521-34—the basis of the Swedish, Danish, Icelandic, Dutch, and Finnish versions; the *Authorized* or *King James*, prepared by a special commission of scholars in England under James I., 1604-11; the *Douay*, a popular name given to a translation into English prepared by Roman Catholic divines—the Old Testament at Douay (1609-10) the New Testament at Rheims (1582); and the *Revised*, a revision of the King James Bible prepared by a committee of British and American Protestant divines, the New Testament appearing in 1881, and the Old Testament in 1885. The number of minor versions is indicated by the fact that, since 1804, translations of the Bible or portions of it have been published in upward of 225 languages. Roman Catholics and Protestants differ in the degree of authority which they attach to the Bible. The Roman Catholic Church "receives with piety and reverence all the books of the Old and New Testaments, since one God is the Author of each" (Council of Trent); but "at the same time it maintains that there is an unwritten word of God over and above Scripture" (Cath. Dict.). Protestants generally hold that "the Supreme Judge, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, and private spirits are to be examined, and in whose sentence we are to rest, can be no other but the Holy Spirit speaking in Scripture" (Westminster Conf. of Faith).

See *Geneva Bible*. *Geneva Bible*, an English translation of the Bible issued from Geneva in 1560 by several English divines who had fled thither to escape the persecution of the reign of Mary. It was the first complete Bible to appear in Roman type, the first to omit the Apocrypha, and the first to recognize the division into verses. This translation was in common use in England till the version made by order of King James was introduced in 1611. The Geneva Bible has also been called the *Breeches Bible*, because Gen. iii. 7 is translated, "Then the eyes of them both were opened, and they knew that they were naked, and they sewed fig leaves together and made themselves breeches."—"Breeches" occurs in previous translations, though the name is given especially to this one.—*Mazarin Bible*, an edition of the Bible printed by Gutenberg at Mentz in 1450-55, being the first book ever printed with movable types. It was so called because the first known copy of it was discovered in the Mazarin library at Paris in 1760.—*Vinegar Bible*, an edition printed at the Clarendon press, Oxford, in 1717, with the heading to Luke xx. as the "Parable of the Vinegar," instead of the "Parable of the Vineyard."—*Wicked Bible*, an edition printed in 1632 in which the word *not* is omitted from the seventh commandment.

Fig. 1.

Bicircular quartic.

Curve of first genus, first division; two real ovals with focal circle and central hyperbola.

an essential analytical similarity to a pair of circles, which it also somewhat resembles to the eye. For the purpose of tracing it, it may be defined as the envelop of all the circles having their centers on a fixed ellipse or hyper-

bola, and cutting a fixed circle orthogonally. This circle is called the *focal circle*, because its intersections with the fixed circle are foci of the quartic.

The latter has, besides two double foci, which are the foci of the quartic, the perpendiculars from the center of the focal circle to the asymptotes of the conic are bitangents to the quartic. (See fig. 1.) The intersections of the focal circle with the quartic are *cyclic points* of the latter.

There are three genera of bicircular quartics. The first embraces all the biserial forms, and these are curves of the eighth class. For these there are two real focal circles and two imaginary ones. The two real circles of centers are an ellipse and a confocal hyperbola. There are four real foci and four real cyclic points. This genus has two divisions. In the first, the four real foci are *con-cyclic*, and the real curve consists of two ovals, one of which lies without of within the other, according as the four real foci are on a confocal ellipse or hyperbola. Fig. 1 shows the latter case, and fig. 2, modified so as to make the upper part like the lower, would show the former. Bicircular quartics of this division have the property that three points can be taken so that the distances r_1, r_2, r_3 of any point of the curve therefrom shall be expressible by an equation $ar_1 + br_2 + cr_3 = 0$.

The second division of the first genus embraces curves whose four real foci lie in two pairs or two focal circles. These real curves consist of single ovals, as in fig. 2. The second genus comprises unicursal curves with one node (besides those at the circular points).

They are of the sixth class. There is one real and one imaginary focal circle. The node may be a cusp with an outloop (shown by slightly modifying fig. 2 in the upper part) or with an in-loop, as in fig. 3; or it may be an ac-node without or within the oval. The third genus contains curves with an ordinary cusp. These are of the fourth class. There is but one focal circle and but one focus. The cusp may point outward, as in fig. 4, or inward, as in a modification of fig. 3.

bidding-prayer (bid'ing-prār), *n.* [See below.]

In England, the prayer before the sermon. As directed in the 55th canon of the Church of England, this is a form in which the preacher calls on the congregation to pray for the church catholic, the sovereign, and different estates of men. A similar form of prayer preceding the sermon has been in use since long before the Reformation. At first it was called *bidding* of the *beads* (literally, praying of the prayers), after the Reformation *bidding* of the *common prayers*, *bidding* (of) *prayers* or *prayer* (the last word being object of the first); but after the sixteenth century the word *bidding* came to be popularly regarded as an adjective, or the phrase *bidding prayer* as a quasi-compound, a prayer which bids or directs what is to be prayed for. A collect is now generally substituted for the bidding-prayer (and sometimes called by the same name), but on special occasions, and in cathedrals and at university sermons, the bidding-prayer is always used. Liturgiologists often designate the deacon's litanies of the primitive and the Greek Church as *bidding-prayers*. See *ectene* and *litany*.

Our people, as of yore, may all join their priest and say along with him, before he begins his sermon, the truly Catholic petitions of the *bidding prayer*.

Bifilar suspension, an important contrivance for measuring horizontal couples or forces of rotation, first used in the bifilar magnetometer. The needle, bar, disk, or other body which the couple to be measured is to turn is suspended at equal distances from and on opposite sides of its center of gravity by two equally long threads from two fixed points on one higher level. Thus, under the influence of gravity alone, the suspended body comes to equilibrium with the two threads in a vertical plane. When it is turned through any angle about a vertical axis through its center, its weight tends to restore it to its original position; and the moment of this force of restitution can be accurately calculated from the lengths of the threads, the distances of their attachments, and the weight of the suspended body. This moment increases with the angle of displacement up to 90°; consequently, if the force to be measured is not too great, it will, when it is applied, bring the suspended body to equilibrium in a new position, the inclination of which from the old position being observed affords the means of calculating the magnitude of the force.

Quoted in *Lady Holland's* Sydney Smith, vii.

In some cases statutes are called *bills*, but usually they are qualified by some description: as, a *bill of attainder*.

9. A paper written or printed, and intended to give public notice of something, especially by being exhibited in some public place; an advertisement posted; a placard.—**10. A bank-note**: usually with its amount: as, a five-dollar *bill*. [U. S.]—**Accommodation bill**. See *accommodation*.—**Appropriation bill**. See *appropriation*.—**Approved bill or note**. See *approved*.—**Bank post-bill**, a bill for a sum not less than £10 issued by the Bank of England without charge, payable at seven days' sight and accepted at time of drawing, for convenience in remitting by post. Bills of this kind originated in 1753, when mail-robberies were frequent in England, and are not now in use.—**Bill in equity**, in an equity suit, the pleading in which the plaintiff sets forth the circumstances on which he bases his claim for relief. It corresponds to the *complaint* or *declaration* at common law.—**Bill of adventure**, a writing signed by a merchant, ship-owner, or master to show that goods shipped on board a certain vessel are at the venture of another person, he himself being answerable only for their delivery.—**Bill of credit**, (a) A letter sent by an agent or other person to a merchant requesting him to give credit to the bearer for goods or money. (b) Paper issued by the authority and on the faith of a State to be circulated as money. The Constitution of the United States (Art. See *exception*.—**Bill of exchange**, an order in writing, addressed by one person to another, to pay on demand or at a fixed or determinable future time a certain sum in money to a specified person or to his order. Every completed bill of exchange should bear on its face the following: (a) three names, namely, the sum of the drawer, the drawee, and the payee; (b) the sum to be paid; (c) two dates, namely, the date of drawing and a time for payment or the means of determining the time, as where the bill is payable at sight or a certain time after sight, that is, presentment; (d) the place where it is drawn. If the drawer and drawee are the same person, even in legal effect of name, as where a corporation by one officer draws on itself by naming another officer, as such, as the payee, the paper is not a bill of exchange, but a mere draft or promissory note. The drawer and the payee, however, may be the same, as where one draws to his own order and indorses to a third person. If the paper is not payable absolutely, as where it is expressed to be payable only out of a particular fund, it is not a bill of exchange; but a payment absolutely ordered may be directed to be charged to a particular account of the drawer. The words "value received" are usually inserted, but are not essential to validity. The drawee of a bill becomes liable by accepting it, usually done by writing his name across its face, and he is thereupon called the *acceptor*; but a bill is negotiable before acceptance. In a foreign bill of exchange, the drawer and drawee are residents of different countries. In this respect, in the United States, the residents of the different States are foreign to one another.—**Bills of exchange acts**, a short name by which are known several British statutes (1571, 1578, and 1582), the last of which codifies the whole body of British law relating to negotiable paper.—**Bill of fare**, in a hotel or restaurant, a list of dishes to be served in due course at a regular meal, or which may be ordered.—**Bill of health**, a certificate signed by a consul at the time of her clearing any port or place. See *indictment*.—**Bill of lading**, a receipt for goods delivered to a carrier for transportation. It is usually of goods shipped on board of a vessel and signed by the master of the vessel, acknowledging the receipt of the goods, and usually promising to deliver them in good condition at the place di-

rected, dangers of the sea, the act of God, perils of war, etc., excepted. In foreign trade they are usually drawn up in triplicates, one of which goes to the shipper, one to the consignee, and one is retained by the master. Often abbreviated *B. L.*—**Bills of Lading Act**, a British statute of 1855, vesting rights under bills of lading in the consignee or indorsee, but reserving right of stoppage in transitu and claims for freight. It is often given to a creditor in security for money borrowed, or an obligation otherwise incurred. When it expressly empowers the receiver to sell the goods if the money is not repaid with interest at the appointed time, or the obligation not otherwise discharged, the contract is commonly called in the United States a *chattel mortgage*, not a bill of sale.—**Bills of sale acts**, a name given to several English statutes (1578, 1579, 1582, and 1583), regulating bills of sale, especially when given without transferring possession of the property, and requiring a schedule and registration, for the prevention of fraud on creditors.—**Bill of sight**, a form of entry at a custom-house by which goods respecting which the importer has not the full particulars may be provisionally landed for examination.—**Bill of stores**, a license granted at a custom-house to merchant-shops to carry stores and provisions for their voyage duty-free.—**Bill of sufferance**, a coasting license to trade from port to port without paying customs duty, the dutiable goods being loaded and landed at a bill of exchange wharfs.—**Bill payable, bill receivable**. III., c. 19) invited by the destruction of tea in Boston harbor. See *creditor*.—**Deceased Wife's Sister Bill**, a bill repeatedly introduced into the British Parliament to abrogate the rule of English law which forbids a widower to marry the sister of his deceased wife. Owing to opposition, chiefly on the part of the clergy, it has not up to this time (1889) become a law.—**Deficiency bill**, (a) A short time (1889) become a law.—**Deficiency bill**, (a) A short time (1889) become a law.—**Deficiency bill**, (a) A short time (1889) become a law.

The political consequences of the bill were most important, causing the destruction of the Whig party and the struggle between the proslavery and antislavery parties for the control of the Territories, which culminated in the war of secession and the total abolition of slavery.—**Original bill in equity**, one in law, a bill of complaint originating a litigation: one not connected with a previous bill, as distinguished from one growing out of a matter before litigated in the court by the same person standing in the same interests.—**Pendleton Bill**, a United States statute of 1883 (22 Stat., 403) regulating and improving the civil service: so called after its promoter, Senator George H. Formerly in the United States the game was played with four balls on a table having six pockets, the players scoring both for caroms and for driving the balls into the pockets. (See *carom*.) This is nearly the present *English game*. Since, however, expert players could continue an inning at the game thus played almost without limit, the pockets were dispensed with and counting was made to depend entirely upon caroms. Later, professional players adopted what is known as the *French game*, in which only three balls are used, and this was modified to the *champion's game*, in which a line, called a *ball-line*, is drawn crossing each corner of the table diagonally, within which two counts only can be made. Experts now play also *cushion-caroms*, in which the cue ball must touch the cushion before hitting the second object ball, or hit the second ball again on a return from the cushion; the *ball-line game*, which is the same as the champion's game, but with ball lines 14 inches from the cushion all round the table; and the *bank game*, in which the cue ball must hit the cushion before touching any other ball. [The singular form, *billiard*, is occasionally used, and is always employed in composition.

Some tables are provided with six pockets, one at each corner and one in the middle of each of the long sides; others have four pockets; but billiard tables are now, except in England, commonly made without pockets.

[The word *billion* was introduced into French in the sixteenth century, in the sense of a million to the second power, as a trillion was a million to the third power. At that time numbers were usually pointed off in periods of six figures. In the seventeenth century the custom prevailed of pointing off numbers in periods of three, and thus led to the change in the meaning of the word *billion* in French. The words *billion*, *trillion*, etc., did not apparently come into use in English until a later date, for Locke ("Essay on the Human Understanding," ii. 10, § 6, 1640) speaks of the use of *billion* as a novelty. The English meaning of the word is thus the original and most systematic. The word *billion* is not used in the French of every-day life, one thousand millions being called a *milliard*.]

(se. *animalia*) of *bimanus*, two-handed: see *bimanous*.] An order of *Mammalia*, including man alone, established by Blumenbach, and retained by Cuvier and most naturalists until quite recently. The order is now practically abolished, since it has been shown that, zoologically and morphologically, man differs less from the anthropoid apes than these apes do from most monkeys. The custom is now to revert in this particular to the classification of Linnaeus, who included man with the apes, monkeys, and lemurs in one order, *Primates*. The zoological rank now usually assigned to the genus *Homo* is that of the type of a family *Hominidae* or *Anthropidae*, the term *Bimana* being used, if at all, as the name of a superfamily or suborder, by means of which man alone is thus contrasted with *Simia*.

The generic word is always written first, and with a capital initial letter; it is or is taken as a noun. The specific word follows, and is usually an adjective, or used adjectively, though it may be a noun. In zoology the practice is now to write all specific words with a lower-case (or small) initial, though substantive and personal and geographical words are often written with a capital, which is the common practice in botany. Hence—(*b*) Consisting of two names: as, *binomial* terms. According to this theorem, we have:

$$(x + y)^2 = x^2 + 2xy + y^2$$

$$(x + y)^3 = x^3 + 3x^2y + 3xy^2 + y^3$$

$$(x + y)^4 = x^4 + 4x^3y + 6x^2y^2 + 4xy^3 + y^4$$

$$(x + y)^n = x^n + nx^{n-1}y + \frac{n(n-1)}{2}x^{n-2}y^2 + \frac{n(n-1)(n-2)}{2 \cdot 3}x^{n-3}y^3 + \text{etc.}$$

It is remarkable that each of these writers [Treviranus and Lamarck] seems to have been led, independently and contemporaneously, to invent the same name of *Biology* for the science of the phenomena of life. . . . And it is hard to say whether Lamarck or Treviranus has the priority. . . . Though the first volume of Treviranus' "Biologie" appeared only in 1802, he says . . . that he wrote the first volume . . . about 1796. The "Recherches," etc., in which the outlines of Lamarck's doctrines are given, was published in 1802.

About the length . . . [of Christ's public ministry] there are (beside the isolated and decidedly erroneous view of Trenchard) three theories, allowing respectively one, two, or three years and a few months, and designated as the *triple*, *triple*, *triple*, and *triple* schemes, according to the number of Passovers.

The word *quartic* has now completely superseded *biquadratic*, except in the following phrases.—**Biquadratic equation**, an equation with one unknown quantity the highest power of which contained in the equation is the fourth. Biquadratic equations are always susceptible of algebraic solution; equations of higher degrees are generally capable only of numerical solution.

See the nouns. **Biquadratic parabola**, in geom., a curve line of the third order, having two infinite legs tending the same way.—**Biquadratic root** of a number, the square root of the square root of that number. biquaternion (bi'kwā-tēr'ni-on), *n.* [*< bi* (see *def.*) + *quaternion*.] 1. In math., an imaginary quaternion; a quantity expressible in the form $a + bi + cj + dk$, where i, j, k are three mutually perpendicular vectors, and a, b, c, d are real or imaginary numbers. This is the sense in which Sir W. R. Hamilton used the word. He distinguished such a quantity from a real quaternion, because the whole algebraic procedure with imaginary quaternions is different from and more difficult than that with real quaternions, instead of being essentially the same but more easy, as is the case with ordinary imaginary algebra as compared with real algebra.

2. The ratio of two rotors. This meaning was given to the word by W. K. Clifford, who conceived that Hamilton's biquaternions did not deserve a separate name. In this sense a biquaternion is the sum of two quaternions belonging to different systems, so that their product vanishes.

1. A tree or shrub belonging to the genus *Betula* (which see). The birches have smooth, laminated outer bark and close-grained wood, which in some species is hard and tough, taking a fine polish, and is used in the manufacture of furniture and for many other purposes. The white, gray, or poplar birch, *Betula alba*, the principal European species, is a small tree, but is put to many uses, especially in the old world. The bark is used for tanning and thatching, and yields an oil which is used to give Russia leather its peculiar odor; spruce-oil is also used for this purpose. The leaves, as well as the sap and oil, are used in the treatment of various chronic diseases, and the wood is used for fuel and many other purposes. Several varieties of this species, as the weeping, cut-leaved, and purple birches, are much cultivated for ornament. The canoe or paper-birch of

North America, *B. papyrifera*, is a large tree with a very tough, durable bark, which is largely used by the Indians in the manufacture of canoes and tents. The timber is valuable. The yellow or gray birch, *B. lutea*, is one of the most important deciduous trees of the northern Atlantic forests, growing to a very large size; its wood is heavy, very strong, and hard. The black, sweet, cherry, or mahogany-birch, *B. lenta*, has a very spicy, aromatic bark, yielding a volatile oil identical with oil of wintergreen, and its heavy, dark-colored wood is largely used for making furniture and in ship building. Other prominent species are the red or river birch, *B. nigra*, of the Southern States, and the black birch, *B. occidentalis*, of the Rocky Mountains and westward. Several shrubby species are widely distributed in mountainous and arctic regions, reaching a higher latitude than any other deciduous tree, as the alpine birch (*B. nana*), the low or dwarf birch (*B. pumila*), and the scrub birch (*B. glandulosa*).

2. A birch rod, or a number of birch-twigs bound together, sometimes used for punishing children.—3. An overseer: once applied to Christ in the New Testament.

For ye were as sheep going astray; but are now returned unto the Shepherd and Bishop of your souls.

1 Pet. ii. 25.

2. In the earliest usage of the Christian church, a spiritual overseer, whether of a local church or of a number of churches; a ruler or director in the church. See *elder* and *presbyter*.

Paul and Timothy . . . to all the saints in Christ Jesus which are at Philippi, with the bishops and deacons. Philip. i. 1.

The English version has hardly dealt fairly in this case with the sacred text, in rendering *episcopos*, verse 28 (Acts xv.), *overseers*; whereas it ought there, as in all other places, to have been *bishops*; that the fact of *elders* and *bishops* having been originally and apostolically synonymous might be apparent to the ordinary English reader, which now it is not.

Diaglott, Greek Test., Acts xv. 17.

Bishops and *Presbyters*, literally overseers and elders, are universally admitted to be terms equivalent to a considerable extent, and often, at least applied to the same officers. Smith, Student's Eccles. Hist., p. 176.

3. From an early time, an overseer over a number of local churches; particularly, in the Greek, Oriental, Roman Catholic, and Anglican churches, the title of the highest order in the ministry. See *episcopacy*. The origin of the office of bishop in the Christian church is a matter of dispute. The terms *bishop* and *presbyter* appear to be used interchangeably in the New Testament; but those who support the episcopal form of government maintain that while these terms were not yet limited to their later meanings a difference of rank was indicated by them, that the office of the apostles, as overseers over the local churches and their pastors, was episcopal in its nature, and that the term *bishop* is appropriately used to designate those whom they ordained as their successors in an office which was intended to be permanent; while those who reject the episcopal form of government hold that the apostolic office was purely personal and that the apostles had not and could not have successors. The Roman Catholic Church, the Greek and other Oriental churches, and the Anglican Church claim an unbroken succession of bishops from apostolic times. Moravian bishops also claim an unbroken episcopal succession, but exercise jurisdiction not as diocesan, but jointly. The first Methodist superintendent, the title afterward superseded by *bishop*, was ordained by Wesley in 1784. (See *itinerant bishop*.) In the Greek, Oriental, and Roman Catholic churches the different grades of the office, besides *simple* or *ordinary bishop*, are *archbishop*, *metropolitan*, *primate*, *exarch*, and *patriarch*; these were ecclesiastically instituted for convenience of government. (See *pope*.) The Anglican Church also has bishops and metropolitans. By virtue of concordats, the nomination of Roman Catholic bishops is sometimes made by the temporal power; the former election by the clergy remains in some cathedral chapters, but more commonly names are proposed by the fellow-suffragans and metropolitan, and by the clergy of the diocese to be provided for, to the Pope, who directly appoints and in any case confirms the new bishop. In England bishops are nominated by the sovereign, who, upon request of the dean and chapter for leave to elect a bishop, sends a *compte d'ordre*, or license to elect, with a letter massive, nominating the person whom he would have chosen. The election, by the chapter, must be made within twelve days, or the sovereign has a right to appoint whom he pleases. In the Protestant Episcopal Church in the United States the bishops are elected by the clergy and laity. Bishops are said to be consecrated rather than ordained. Enthronization is the solemn installation following the consecration. A bishop changed from one see to another is said to be *translated*; the church containing his cathedral or episcopal throne is called *cathedral*, and the local jurisdiction indicated by this throne, and the city or locality in which this stands, together with the diocese or territory attached to it, his *see*, to which he is said to be *ordained*, and which is *vacant* when he is absent. This relation is symbolized by the bishop's ring, which in the Western Church is a part of the insignia of his office, together with the miter, staff, and cross. To this office also are applied the term *pontiff* and its derivatives. Twenty-four of the English bishops and the two archbishops sit in council of the realm, with seats in the House of Lords, and certain political and judicial or quasi-judicial functions. In the Mormon Church the bishop is an officer of the Aaronic or lesser priesthood, presides over it, ministers in outward ordinances, conducts the temporal business of the church, and acts as judge on transgressors. Often abbreviated *bis*. See *chorepiscopus* and *vicar apostolic*.

of the principal or cathedral church of his diocese. According to a later arrangement, which continues to be the general rule in Roman Catholic and Anglican cathedrals, it is placed at the extreme east end of the stalls on either (preferably the northern or gospel) side, and is generally separate, but sometimes forms part of the stalls. It is usually of wood, but often of marble or bronze. Also called *cathedra*. Boy-bishop. See *boy*.—Cardinal bishop. bismuth (biz'muth), *n.* [= F. *bismuth*, \langle G. *bismuth*, now commonly *wismut*, *wismuth*, orig. *wismuth*: of mod. (17th century) but unknown origin.] Chemical symbol, Bi; atomic weight, 208; specific gravity, 9.6 to 9.8. A metal of a peculiar light-reddish color, highly crystalline, and so brittle that it can be pulverized. Its crystalline form is rhombohedral, closely approximating that of the cube. It occurs native in imperfect crystallizations, fliform shapes, and disseminated particles, in the crystalline rocks; also as a sulphuret, and in combination with tellurium and some other metals, and in various oxidized combinations. The native metal and the carbonate (*bismutite*) are the chief important sources of the bismuth of commerce. Until recently, almost the entire supply of the metal came from Schneeberg in Saxony, where it occurs in combination with ores of cobalt, arsenic, and silver. Nearly all the bismuth of commerce contains at least a trace of silver. Bismuth is a remarkable metal in that its specific gravity is diminished, instead of being increased, by pressure. It is the most diamagnetic of the metals. It fuses at a comparatively low temperature (267°), and is volatilized at a white heat. Alloys of bismuth with tin and lead fuse at a temperature considerably less than that of boiling water. (See *Newton's* and *Rose's metals*, under *metal*.) Alloys of the same metals with the addition of cadmium fuse at still lower temperatures;

one prepared by Lipowitz remains perfectly fluid at 140°. These alloys have been used to some extent for ciphers and for stereotyping, but are now of little practical importance. The chief uses of bismuth are as a medicinal and as a cosmetic. For these purposes it is prepared in the form of the subnitrate called in the old pharmaceutical language *matresoleum bismuthi*. The cosmetic, in preparing which the basic chlorid has also been employed, is known as pearl powder or blanc d'Espagne. Bismuth has of late years been much experimented with as a possible component of useful alloys, for several of which patents have been issued; but no one of these alloys is known to have come into general use. Bismuth has also been used to a limited extent in the manufacture of highly refractive glass, and of brass (which see). It is used with antimony in the thermoelectric pile or battery. (See *Thermoelectricity*.) It has also begun to be used to some extent in the manufacture of porcelain, for the purpose of giving to its surface a peculiar colorless, iridescent luster, which can also be had of various colors when other metals are used in combination with the bismuth. This metal is one for which the demand is extremely fluctuating, but on the whole increasing; and, as its ores have nowhere been discovered in large quantity, its price has been more variable than that of any other metal, with the possible exception of nickel, running between events and \$5 a pound. The total consumption of the metal is probably between 25 and 40 tons a year, and it comes chiefly from the Erzgebirge (between Saxony and Bohemia), France, South America, and New South Wales. It was called by the alchemists, while in their uncertain condition of knowledge as to its nature, by various names, as *matresola argentea*, *plumbum cinereum*, *stannum cinereum*, etc.; also called formerly in French *étain de glace*, corrupted in English into *ice-glass*. Bismuth-blende, the mineral culytite (which see). Bismuth-glance, an oxid of bismuth. The aurochs, or bonasus, a European wild ox: hence applied to several similar animals, recent and extinct.—2. *Bison* or *Bos americanus*, improperly called the buffalo, an animal which formerly ranged over most of the United States and much of British America in countless numbers, now reduced to probably a few thousands, and apparently soon to become extinct as a wild animal. It formerly extended into some of the Atlantic States, as Virginia; the contraction of the area of its habitat and the reduction of its numbers have gone on steadily with the advance of European occupation; the construction of the Union Pacific railroad cut the great herd in

two, leaving a southern or Texan herd, chiefly in the region of the Staked Plains, and a northern or Yellowstone or Saskatchewan herd in the region of the upper Missouri and northward. The animal resembles the aurochs (which see), but is considerably smaller, the hump is very high and large; the hind quarters are light; the tail is about

American Bison (*Bison americanus*)

20 inches long, ending in a wisp of hairs of about 6 inches additional; the horns, especially in the male, are short, thick, and much curved; the head is carried very low, the long shaggy hair of the fore parts sometimes sweeps the ground; the color is blackish in fresh pelages, more brown or gray in worn ones and in aged individuals; the calves are reddish. Formerly the tan-covered skins were much used as robes, but only the cows were killed for them, the hides of the bulls being not easily manageable. In summer, after shedding its hair, the animal is nearly naked.

plied to those years which have 366 days, the extra day being inserted in the month of February. See *bissexatus*. This occurs every fourth year, taken as each year of which the number is divisible by 4 without remainder. Inasmuch, however, as a year of 365 days exceeds the true length of a solar astronomical year by 11 minutes and 14 seconds, amounting to an error of a day in 128 years, it is provided in the Gregorian calendar that the intercalary day should be omitted in all centenary years except those which are multiples of 400.

II. n. A leap-year (which see).

bissexus (bi-seks'us), *n.* [*L.*: see *bissex*, and cf. *bissextile*.] The extra or intercalary day inserted by the Julian calendar in the month of February every fourth year, in order to make up the six hours by which (it was reckoned) the natural or solar year exceeds the common year of 365 days. This extra day was provided for by reckoning twice the sixth day before the calendar's first of March (or the sixth day from the calends of March, both days included, reckoning backward from the succeeding month, as was the custom of the Romans), the "sixth" (or first sixth day proper) thus corresponding to February 24th, according to our reckoning, and the extra sixth, or "second sixth," to our February 25th. Since 1682 when the Anglican liturgy was revised, the 29th day of February has been, more conveniently, regarded as the intercalated day in all English-speaking countries. In the ecclesiastical calendar of the countries of continental Europe, however, the 24th day of February is still reckoned as the bissexus or intercalary day.

bisson (bis'on), *a.* [Also *E. dial. becen*, *bezen*; *ME. bisen*, *bisen*, *ONorth. biseen*, blind, of uncertain origin; perhaps *AS. bi, be, by*, + **sean*, **siga*, as in *gesiga*, adj., seen, visible, *scen*, see. To prepare it, soot (that of beech is the best) is put into water in the proportion of two pounds to a gallon and boiled half an hour; after standing to settle, and while hot, the clearer part of the fluid must be poured off to remove the salts, and the sediment (which is bister) evaporated to dryness. blizzard (bliz'fərd), *n.* [An expressive word, originating in the United States, appar. at first locally on the Atlantic coast (see first quot.), and carried thence to the West, where, in a new application, it came into general notice and use in the winter of 1880-81. The word is evidently a popular formation, and is prob. based, with the usual imitative variation observable in such formations, on what to the popular consciousness is the common root of *blaze*, *blast*, *blow* (the latter notions at least being appar. present in the familiar third sense). In the orig. sense a blizzard is essentially a "blazer," of which word, indeed, it may be considered a manipulated form: see *blaze*¹, and cf. *blaze*², *blast*, *bluster*.] 1. [Appar. the earliest sense, but not recorded, except in the figurative use, until recently.] A general discharge of guns; a rattling volley; a general "blazing away." See extract.

Along the Atlantic coast, among the gunners who often limit in parties stationed near together behind blinds, waiting for the flocks of migratory birds, the word *blizzard* means a general discharge of all the guns, nearly but not quite together—a rattling volley, differing from a broadside in not being quite simultaneous. This use of the word is familiar to every longshore man from Sandy Hook to Currituck, and goes back at least forty years, as my own memory attests. . . . The longshore men of forty years ago were all sailors, and many of them had served in the navy. That they may have learned the word there is rendered probable by the rather notable accuracy with which they always distinguished between a *blizzard* and a broadside. This points to a nautical origin of the word, though it made no progress in general use till it struck the Western imagination as a term for that convulsion of the elements for which "snow-storm," with whatever descriptive epithet, was no adequate name, and the keen ear of the newspaper reporter caught it and gave it currency as "reputational" English.

N. Y. Evening Post, March 24, 1887.

Hence—2. Figuratively, a volley; a sudden (oratorical) attack; an overwhelming retort. [This seems to be the sense in the following passage, where Bartlett explains the word "not known in the Eastern States," he says as "a poser."]

A gentleman at dinner asked me for a toast; and supposing he meant to have some fun at my expense, I concluded to go ahead, and give him and his likes a blizzard. *Daniel Crockett*, *Tour Down East*, p. 16.

3. A gale or hurricane accompanied by intense cold and dry, driving snow, common in winter on the great plains of the States and Territories of the northwestern United States east of the Rocky Mountains, especially Dakota, and in Manitoba in British America. It is described in the "American Meteorological Journal" as "a mad rushing combination of wind and snow which neither man nor beast could face."

blood; perhaps, with formative *-d* (-th), from the root of *blōcan*, *E. blow*², bloom, flourish, with reference to either life or color.] 1. The fluid which circulates in the arteries and veins.

From it the solid tissues take their food and oxygen, and into it they discharge their waste products. The blood is red in vertebrates, except amphioxus, and colorless, red, bluish, greenish, or milky in other animals. In passing through the lungs (see *circulation*) it is oxygenated and gives up carbon dioxide; then, after passing through the heart, it is carried as *arterial* blood by the arteries to the tissues; from the tissues it is returned to the heart through the veins, deprived of its nutrient properties, as *venous* blood. The venous blood of the *Craniota* is dark red, the arterial bright scarlet. The specific gravity of human blood in health is about 1.055. The blood consists of a fluid pale yellow plasma and semi-solid corpuscles; the latter constitute between

one third and one half of it; they are of two kinds, red and white. In a cubic millimeter of healthy human blood there are about 5,000,000 corpuscles, the red being to the white on the average about as 350 to 1. The red corpuscles are flat biconcave disks, non-nucleated and almost always round in mammals, and nucleated and almost always oval in other *Craniota*. Their diameter averages in man about 7.5 micromillimeters ($\frac{3}{40}$ inch), while in *Amphibia tridactylum* the longer diameter is 67.2 micromillimeters ($\frac{1}{3}$ inch). Their color is due to hemoglobin, which constitutes about 90 per cent. of their dried substance. The white corpuscles are nucleated, slightly larger than the red in man, and exhibit active amoeboid movements. Animal blood is used in clarifying sugar, in making animal charcoal, as a manure, and in many other ways.

In its simplest form, as used, for example, by gas-fitters, it is merely a conical tube of brass, glass, or other substance, usually about 7 inches long, 1/2 inch in diameter at one end, and tapering so as to have a very small aperture at the other, within 2 inches or so of which it is bent nearly at a right angle. The blowpipe of the mineralogist is provided with a small chamber near the jet, in which the moisture from the mouth collects. The current of air is often formed by a pair of bellows instead of the human breath, the instrument being fixed in a proper frame for the purpose. The most powerful blowpipe is the oxyhydrogen or compound blowpipe, an instrument in which oxygen and hydrogen (in the proportions necessary for their combination), propelled by hydrostatic or other pressure, and coming from separate reservoirs, are made to form a united current in a capillary orifice at the moment when they are kindled. The heat produced is such as to consume the diamond and to fuse or vaporize many substances refractory at lower temperatures. The blowpipe is used by goldsmiths and jewelers in soldering, by glass-blowers in softening and shaping glass, and extensively by chemists and mineralogists in testing the nature and composition of substances. =*Syn. Error, Mistake, Blunder, Bull.* An error is a wandering from truth, primarily in impression, judgment, or calculation, and, by extension of the idea, in conduct; it may be a state. Diet., "quotes from the 'Painesville (Ohio) Telegraph' of July 6 and Nov. 2, 1827, the word *bogus* as a substantive applied to an apparatus for coining false money. Mr. Eber D. Howe, who was then editor of that paper, describes in his 'Autobiography' (1878) the discovery of such a piece of mechanism in the hands of a gang of coiners at Painesville in May, 1827; it was a mysterious-looking object, and some one in the crowd styled it a 'bogus,' a designation adopted in the succeeding numbers of the paper. Dr. Willard considers this to have been short for *tantrabogus*, a word familiar to him from his childhood, and which in his father's time was commonly applied in Vermont to any

ill-looking object; he points out that *tantara-bobs* is given in Halliwell as a Devonshire word for the devil. *Bogus* seems thus to be related to *bogy*, etc." (N. E. D.) (b) Heated; inflamed; bursting with passion: as, *boiling* indignation.

Boiling spring, a spring or fountain which gives out water at the boiling point or at a high temperature. The

most remarkable boiling springs are the geysers, which throw up columns of water and steam, but there are many others in various parts of the world often associated with geysers, characterized only by ebullition and emission of steam. Some of the latter, as in California and New Zealand, are strongly impregnated with mineral matters and variously colored, while others are charged with liquid mud. See *geyser*.

boilingly (boi'ling-li), *adv.* In a boiling manner.

The lakes of bitumen
Rise *boilingly* higher. Byron, *Manfred*, I. 1.

boiling-point (boi'ling-point), *n.* The temperature at which a liquid is converted into vapor with ebullition; more strictly, the temperature at which the tension of the vapor is equal to the pressure of the atmosphere. This point varies for different liquids, and for the same liquid at different pressures, being higher when the pressure is increased, and lower when it is diminished. Under the normal atmospheric pressure (see *atmosphere*) water boils at 212° F. (100° C., 80° R.), and it is found that the boiling-point varies .58 of a degree F. for a variation in the barometer of half an inch. Hence water will boil at a lower temperature at the top of a mountain than at the bottom, owing to diminution in the pressure; a fact which leads to a method of measuring the height of a mountain by observing the temperature at which water boils at the bottom of the mountain and at the top. At the top of Mont Blanc water boils at 185° F. Under a pressure of about $\frac{1}{10}$ of an atmosphere water would boil at 40° F., while under a pressure of 10 atmospheres the boiling-point would be raised to 256° F. A liquid may be heated much above its true boiling-point without boiling; but the superheated vapor immediately expands until its temperature is reduced to the boiling point. Hence, in determinations of the boiling-point, the thermometer is never immersed in the liquid, but in the vapor just above it.

Kopp's law of boiling-points, the proposition that in certain homologous series of chemical substances each addition of CH₂ is accompanied by a rise in the boiling-point of about 19.5° C.

It is used by throwing it in such a way that the line winds around the object aimed at, as the legs of an animal. A smaller weapon of the same sort is in use among the Eskimos for killing birds.

The *bolal*, or balls, are of two kinds: the simplest, which is used chiefly for catching ostriches, consists of two round stones, covered with leather, and united by a thin, plated thong, about eight feet long. The other kind differs only in having three balls united by thongs to a common centre. The Gaucho holds the smallest of the three in his hand, and whirls the other two around his head; then, taking aim, sends them like chain shot revolving through the air. The balls no sooner strike any object, than, whirling round it, they cross each other and become firmly hitched. *Darwin*, *Voyage of Beagle*, iii. 50.

= *Syn.* 3. *Bombast*, *Fustian*, *Bathos*, *Turgidness*, *Tumidness*, *Rent*. "Bombast was originally applied to a stuff of soft, loose texture, used to swell the garment. *Fustian* was also a kind of cloth of stiff, expansive character. These terms are applied to a high, swelling style of writing, full of extravagant sentiments and expressions. *Bathos* is a word which has the same application, meaning generally the mock-heroic—that depth into which one falls who overleaps the sublime; the step which one makes in passing from the sublime to the ridiculous." (*De Mille*, Elements of Rhetoric, p. 225.) *Bombast* is rather stronger than *fustian*. *Turgidness* and *tumidness* are words drawn from the swelling of the body, and express mere inflation of style without reference to sentiment. *Rent* is extravagant or violent language, proceeding from enthusiasm or fanaticism, generally in support of extreme opinions or against those holding opinions of a milder or different sort.

A Linnean genus of lepidopterous insects, now the type of the family *Bombycidae*. The caterpillar of the *Bombyx mori* is well known by the name of *silk-worm*. When full grown it is 3 inches long, whitish-gray, smooth, with a horn on the penultimate segment of the body. It feeds on the leaves of the mulberry (in the United States also on those of the *Osage* orange), and spins an oval cocoon of the size of a pigeon's egg, of a close tissue, with very fine silk, usually of a yellow color, but sometimes white. Each silk-fiber is double, and is spun from a viscid substance contained in two tubular organs ending in a spinneret at the mouth. A single fiber is often 1,000 feet long. It requires 1,000 worms to produce 1 pound of silk. Greek missionaries first brought the eggs of the silkworm from China to Constantinople in the reign of Justinian (A. D. 527-565). In the twelfth century the cultivation of silk was introduced into the kingdom of Naples from the *Morica*, and several centuries afterward into France. The silkworm undergoes a variety of changes during the short period of its life. When hatched it appears as a black worm; after it has finished its cocoon it becomes a chrysalis and finally a perfect cream-colored insect of moth, with four wings. For other silk-spinning bombycids, see *silk-worm*. See *entomology* in next column.

D. 600, refers to the writing of runes on tablets of ash; cf. L. *liber*, book, *liber*, bark, Gr. *βιβλίον*, book, *βιβλος*, book, papyrus: see *liber*, *Bible*, *paper*); but AS. *bōcstaf*, if lit. The connection with *beech* remains uncertain: see *beech*, *buck*.] 1. A writing; a written instrument or document, especially one granting land; a deed. bookkeeper (bûk'kē'pér), *n.* One who keeps accounts; one whose occupation is to make a formal balanced record of pecuniary transactions in account-books.

bookkeeping (bûk'kē'ping), *n.* The art of recording pecuniary transactions in a regular and systematic manner; the art of keeping accounts in such a manner as to give a permanent record of business transactions from which the true state or history of one's pecuniary affairs or mercantile dealings may at any time be ascertained.

Properly kept books show what a merchant has, what he owes, and what is owing to him, as well as what sums he has received and paid, the losses he has incurred, etc. Books are kept according to one of two chief methods, viz., by *single* or by *double entry*. The former is more simple and less perfect than the latter, and is now in use chiefly in retail business.

In *bookkeeping by single entry*, three books, a day-book, a cash-book, and a ledger, are commonly used, but the essential book is the ledger, containing accounts under the names of the persons with whom a trader deals, goods or money received from any one of them being entered on one side of the account, called the credit side, and goods sold or money paid to that person being entered on the opposite or debit side of the account. In *bookkeeping by double entry*, the ledger accounts are of two kinds, personal accounts such as those just described, and book-accounts, in which the commodities dealt in are made the subjects of separate accounts, and have a debit and a credit side, as in personal accounts. Thus, if a trader purchase 100 bales of cotton from A. B., the account in the ledger headed A. B. is *credited* with 100 bales of cotton, so much, while the account headed Cotton is *debited* with the same quantity and amount; should the trader sell 10 bales to C. D., the account headed C. D. is *debited* with 10 bales at so much, and the account headed Cotton is *credited* with 10 bales, and so on. These book-accounts are based on the principle that all money and articles received become debtors to him from whom or to that for which they are received, and on the other hand, all those who receive money or goods from us become debtors to cash or to the goods. In this way every transaction is entered in the ledger on the creditor-side of one account and on the debtor side of another. The books used in double entry vary in number and arrangement according to the nature of the business and the manner of recording the facts. Transactions as they take place from day to day are generally recorded in such books as the stock-book, cash-book, bill book, invoice book, and sales-book, or they may all be recorded in order in a waste book or day-book. Upon these books or additional documents are based the journal and ledger. The former contains a periodical abstract of all the transactions recorded in the subordinate books or in documents not entered in these, classified into debits and credits, while the latter contains an abstract of all the entries made in the former, classified under the heads of their respective accounts.

book-knowledge (bûk'nol'ej), *n.* Knowledge gained by reading books, in distinction from that obtained through observation and experience.

bookland (bûk'land), *n.* [Also *bockland*, often cited in the old legal form *bocland*, *< AS. bōc-land, < bōc, charter, book, + land, land.*] In *old Eng. law*, charter land, held by deed under certain rents and free services; free socage land. This species of tenure has given rise to the modern freeholds.

The title to *boe-land* was based upon the possession of a *boe*, or written grant.

D. W. Ross, German Land-holding, Notes, p. 170.

This process of turning public property into private went on largely in later times. The alienation was now commonly made by a document in writing, under the signatures of the King and his Witan; land so granted was therefore said to be *booked* to the grantee, and was known as *bookland*.

W. E. Griffiths, in N. A. Rev., CXX. 283.

3. One who makes a book (see *book*, *n.*, 9) on a race or other doubtful event; a professional betting man. See *extract*.

In betting there are two parties—one called "layers," as the *book-makers* are termed, and the others "backers," in which class may be included owners of horses as well as the public. The backer takes the odds which the *book-maker* lays against a horse, the former speculating upon the success of the animal, the latter upon its defeat; and taking the case of Cromorne for the Derby of 1872, just before the race, the *book-maker* would have laid 3 to 1, or perhaps £1000 to £300 against him, by which transaction, if the horse won, as he did, the backer would win £1000 for risking £300, and the *book-maker* lose the £1000 which he risked to win the smaller sum. At first sight this may appear an act of very questionable policy on the part of the *book-maker*; but really it is not so, because, so far from running a greater risk than the backer, he runs less, inasmuch as it is his plan to lay the same amount (£1000) against every horse in the race, and as there can be but one winner, he would in all probability receive more than enough money from the many losers to pay the stated sum of £1000 which the chances are he has laid against the one winner, whichever it is.

In later use some assume also an allusion to *boom², n.*, 3. When a boom of logs breaks, the logs rush with violence down the stream, and are then said to be "booming"; but this appears to be the ordinary ppr. adj. *booming*, roaring, rushing with violence, and to have no connection with *boom², n.* or *v.*] **I. intrans.** To go on with a rush; become suddenly active; be "lively," as business; be prosperous or flourishing. [The earliest instance of the word in this sense appears to be in the following passage:

"The Republicans of every other State are of the same way of thinking. The fact is, the Grant movement (for a third term of the presidency) is *booming*." *J. B. McCullagh*, in *St. Louis Globe-Democrat*, July 18, 1878.

Mr. McCullagh, in a letter to one of the editors of this Dictionary, says: "I cannot explain how I came to use it, except that, while on the gunboats on the Mississippi river during the war, I used to hear the pilots say of the river, when rising rapidly and overflowing its banks, that it (the river) was 'booming.' The idea I wished to convey was that the Grant movement was rising—swelling, etc. The word seemed to be a good one to the ear, and I kept it up. It was generally adopted about a year afterward. I used it as a noun after a while, and spoke of 'the Grant boom.'" They all say that one railroad spoils a town, two bring it to paragon, and three make it boom.

E. Marston, *Frank's Ranch*, p. 36.

boomerang (bôm'mē-rang), *n.* [Recently also *boomerang*, *boomerang*, *boomerang*; from a native name in New South Wales; *wo-mur-rang* and *bumarin* are cited as aboriginal names of clubs.]

1. A missile weapon of war and the chase, used by the aborigines of Australia, consisting of a rather flat piece of hard wood bent or curved in its own plane, and from 16 inches to 2 feet long. Generally, but not always, it is flatter on one side than on the other. In some cases the curve from end to end is nearly an arc of a circle, in others it is rather an obtuse angle than a curve, and in a few examples there is a slight reverse curve toward each end. In the hands of a skilful thrower the boomerang can be projected to great distances, and can be made to ricochet almost at will; it can be thrown in a curved path, somewhat as a bowl can be "screwed" or "twisted," and it can be made to return to the thrower, and strike the ground behind him. It is capable of inflicting serious wounds.
